The Mississippi Nonhazardous Solid Waste Management Regulations (11 Miss. Admin. Such materials shall generally consist of clays, silty clays, clayey silts, or other soils which have an average hydraulic conductivity of  $1 \times 10^{-6}$  cm/sec or less. The thickness, or depth, of these materials shall extend to at least five feet immediately beneath the base of the landfill liner.*” Greenway Environmental Services, LLC (Greenway) is proposing a redesign of the permitted disposal area at the existing Green Meadow Landfill and portions of the proposed disposal area do not appear to have the required naturally occurring buffer. Staff of the MDEQ Waste Division will present information regarding the landfill siting criteria and information on the existing Green Meadow Landfill.
